STUDENT DECLARATION

This is to declare that this report has been written by me. No part of the report is copied from other sources. All information included from other sources have been duly acknowledged. I aver that if any part of the report is found to be copied, I shall take full responsibility for it.

INTRODUCTION

Before creating any website, it is common to practice to visualize the layout, the design and all the features you intend to incorporate. In addition, you think about how users will interact with each page and how the site should perform.

➤ OBJECTIVE OF THE PROJECT

Our aim is to create an effective, Helpful and need website that caters the requirements of all the students and all type of people as. The website should be easily handled, efficient and user friendly. It will give us emergency blood and find the donor.

➤ DESCRIPTION OF THE PROJECT

- Blood Donation websites describing a specific language in computer science.

Example: HTML And CSS.

- Compatible Blood Type Donors
- Topics are provided of English language.
- Find Donar easily to this web sites
- “Contact us” option is created through which you can give the feedback.

➤ SCOPE OF THE PROJECT

- Create an integrated website that projects a consolidated and consistent about blood donation.
- To increase the option of choosing the best site for Blood Donation.
- To provide features that how we can help the emergency time to donate blood and save the life.
- Give people the ability to contact the website.

SYSTEM DESCRIPTION

This is an helpful web sites for students and all type of pepole who can easily use and find the blood Donar.

With this you can easily learn and give information to donate how to blood and its benifits.

This is the best way to:

- Save life to Donate blood.
- Blood is the most precious gift that anyone can give to another person
- Blood is needed by women with complications during pregnancy and childbirth, children with severe anaemia, often resulting from malaria or malnutrition, accident victims and surgical and cancer patients.

It contains:

- Home page
- About Us
- Singup/Login
- Why Donate blood
- Who can give Blood
- Where to Donate

Donate Blood Save Life

[Home](#)[About Us](#)[Singup/Login](#)[Who Can Give Blood](#)[Where to Donate](#)

Why Should People Donate Blood ?

Blood is the most precious gift that anyone can give to another person – the gift of life. A decision to donate your blood can save a life, or even several if your blood is separated into its components – red cells, platelets and plasma – which can be used individually for patients with specific conditions.

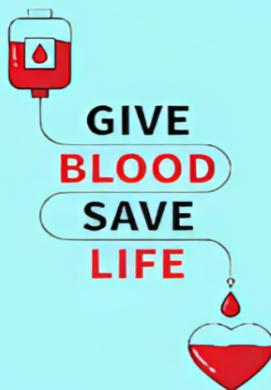

Safe blood saves lives. Blood is needed by women with complications during pregnancy and childbirth, children with severe anaemia, often resulting from malaria or malnutrition, accident victims and surgical and cancer patients.

There is a constant need for a regular supply of blood because it can be stored only for a limited period

that blood will always be available whenever and wherever it is needed.

How Much Blood Will Be Taken.? Will I Have Enough.?

In most countries, the volume of blood taken is 450 millilitres, less than 10 per cent of your total blood volume (the average adult has 4.5 to 5 litres of blood). In some countries, a smaller volume is taken.

Your body will replace the lost fluid within about 36 hours.

Who Can Give Blood.?

Most people can give blood if they are in good health. There are some basic requirements one needs to fulfill in order to become a blood donor. Below are some basic eligibility guidelines:

AGE:-

You are aged between 18 and 65.

In some countries national legislation permits 16–17 year-olds to donate provided that they fulfil the physical and hematological criteria required and that appropriate consent is obtained. In some countries, regular donors over the age of 65 may be accepted at the discretion of the responsible physician. The upper age limit in some countries are 60.

WEIGHT:-

You weigh at least 50 kg.

In some countries, donors of whole blood donations should weigh at least 45 kg to donate $350 \text{ ml} \pm 10\%$.

HEALTH:-

PREGNANCY AND BREAST-FEEDING:-

Following pregnancy, the deferral period should last as many months as the duration of the pregnancy.

It is not advisable to donate blood while breast-feeding. Following childbirth, the deferral period is at least 9 months (as for pregnancy) and until 3 months after your baby is significantly weaned (i.e. getting most of his/her nutrition from solids or bottle feeding).

MORE INFORMATION ON ELIGIBILITY TO DONATE:-

National eligibility guidelines must be followed when people donate blood in the blood service in specific countries. To find out whether any health conditions, medications, professions or travel history could affect your ability to give blood, please search for detailed information in the national/local blood services.

FUTURE WORK

Most students and teachers probably accesses websites from computers in their office, laboratory, school or home. There is much scope for speculation and discussion. We certainly expect to see more educational websites and a greater variety of educational websites as use of the internet increases and more and more students and teachers look for free educational resources online.

*****THANK YOU*****
